1.	A computer program product for automated e-business services, the computer program
proc	duct embodied on one or more computer-readable media of a first computing system and
com	aprising:

computer-readable program code means for reading a specification of an e-business service; and

computer-readable program code means for processing the specification to carry out the e-business service, further comprising:

computer-readable program code means for receiving one or more input documents for the e-business service; and

computer-readable program code means for performing one or more of: (1) transforming the input documents into other documents, according to transformation information that may be provided in the specification, and (2) operating upon the input documents and/or the other documents to create one or more new documents, according to operating actions that may be provided in the specification.

- 2. The computer program product according to Claim 1, further comprising computerreadable program code means for forwarding the other documents and/or the new documents to a computing system other than the first computing system.
- 3. The computer program product according to Claim 1, wherein the specification and the input documents are encoded in a structured markup language.

- 1 4. The computer program product according to Claim 1, wherein the other documents and the new documents are encoded in a structured markup language.
- The computer program product according to Claim 3 or Claim 4, wherein the structured markup language is a language known as "the Extensible Markup Language (XML)" or a
- 1 6. The computer program product according to Claim 1, wherein the computer-readable program code means for operating upon the input documents and/or the other documents further comprises:

computer-readable program code means for invoking one or more software-implemented processes; and

computer-readable program code means for coordinating results of the invocations.

- 7. The computer program product according to Claim 6, further comprising computer-readable program code means for repetitively executing the computer-readable program code means for processing, until reaching a final result of the e-business service, wherein the other documents, the new documents, and/or the coordinated results of the invocations now function as the input documents.
- 8. A system for automated e-business services, comprising:

derivative thereof.

3	means for processing the specification to carry out the e-business service, further			
4	comprising:			
5	means for receiving one or more input documents for the e-business service; and			
6	means for performing one or more of: (1) transforming the input documents into			
7	other documents, according to transformation information that may be provided in the			
8	specification, and (2) operating upon the input documents and/or the other documents to create			
9	one or more new documents, according to operating actions that may be provided in the			
10	specification.			
James Coal George				
1	9. The system according to Claim 8, further comprising means for forwarding the other			
1 1 2 2 mg mg	documents and/or the new documents to a computing system other than the first computing			
3	system.			
	10. The system according to Claim 8, wherein the specification and the input documents are			
2	encoded in a structured markup language.			
1	11. The system according to Claim 8, wherein the other documents and the new documents			
2	are encoded in a structured markup language.			

means for reading a specification of an e-business service; and

- The system according to Claim 10 or Claim 11, wherein the structured markup language is 12. 1
- a language known as "the Extensible Markup Language (XML)" or a derivative thereof. 2

2

1	13.	The system according to Claim 8, wherein the means for operating upon the input		
2	documents and/or the other documents further comprises:			
3		means for invoking one or more software-implemented processes; and		
4		means for coordinating results of the invocations.		
1	14.	The system according to Claim 13, further comprising means for repetitively executing the		
2	mean	s for processing, until reaching a final result of the e-business service, wherein the other		
3	documents, the new documents, and/or the coordinated results of the invocations now function as			
4	the input documents.			
1	15.	A method performed by one or more computers for automated e-business services,		
	comp	rising steps of:		
3		reading a specification of an e-business service; and		
3		processing the specification to carry out the e-business service, further comprising steps		
· · · · · · · · · · · · · · · · · · ·	of:			
6		receiving one or more input documents for the e-business service; and		
7		performing one or more of: (1) transforming the input documents into other		
8	docur	ments, according to transformation information that may be provided in the specification, and		
9	(2) o _j	perating upon the input documents and/or the other documents to create one or more new		
10	docur	ments, according to operating actions that may be provided in the specification.		

The property of the property o

The method according to Claim 15, further comprising the step of forwarding the other 16. 1 2 documents and/or the new documents to a computing system other than the first computing 3 system. The method according to Claim 15, wherein the specification and the input documents are 1 17. encoded in a structured markup language. 2 The method according to Claim 15, wherein the other documents and the new documents 1 18. 2 are encoded in a structured markup language. 1 19. The method according to Claim 17 or Claim 18, wherein the structured markup language ⁽²⁾2 is a language known as "the Extensible Markup Language (XML)" or a derivative thereof. [] |== 1 The method according to Claim 15, wherein the step of operating upon the input 20. 1 2 documents and/or the other documents further comprises steps of: invoking one or more software-implemented processes; and coordinating results of the invocations. 4 21. The method according to Claim 20, further comprising the step of repetitively executing 1 the processing step, until reaching a final result of the e-business service, wherein the other 2 documents, the new documents, and/or the coordinated results of the invocations now function as 3 4 the input documents.

Ari Hing H. H.

ij. 2 5

1	22 .	A method of conducting business by using automated e-business services, comprising
2	steps	of:
3		reading a specification of an e-business service; and
4		processing the specification to carry out the e-business service, further comprising steps
5	of:	
6		receiving one or more input documents for the e-business service; and
7		performing one or more of: (1) transforming the input documents into other
8	docur	nents, according to transformation information that may be provided in the specification, and
9	(2) op	perating upon the input documents and/or the other documents to create one or more new
Thin, that then the train of th	docur	ments, according to operating actions that may be provided in the specification.
4) 4)		
1	23.	A method of defining e-business process and data interactions, further comprising steps of:
2		defining data inputs to be used by an e-business service;
3		defining interactions to be carried out when operating the e-business service;
= 4		specifying details of the data inputs in a structured markup language syntax;
5		specifying details of the interactions in the structured markup language syntax; and
6		creating one or more e-business service definition documents wherein the specified details
7	of the	data inputs and the specified details of the interactions are recorded.
1	24.	The method according to Claim 23, wherein the structured markup language is a language
2	know	n as "the Extensible Markup Language (XML)" or a derivative thereof.

1	25 .	A method of defining process and data interactions for an application described by a finite
2	state n	nachine, further comprising steps of:
3		defining data inputs to be used by the application;
4		defining interactions to be carried out when operating the application;
5		specifying details of the data inputs in a structured markup language syntax;
6		specifying details of the interactions in the structured markup language syntax; and
7		creating one or more application definition documents wherein the specified details of the
8	data in	puts and the specified details of the interactions are recorded.
1	26.	The method according to Claim 25, wherein the structured markup language is a language
2	known	as "the Extensible Markup-Language (XML)" or a derivative thereof.
1	27.	A method performed by one or more computers for automating data and process
2	interac	tions between a first application and one or more other applications, comprising steps of:
3		providing one or more application definition documents encoded in a structured markup
4	langua	ge, wherein the application definition documents specify the interactions and one or more
5	data in	puts to be used in the interactions, and wherein details of the specified interactions and data
6	inputs	are specified in the structured markup language; and
7		processing the application definition documents to carry out the data and process
8	interac	tions.

1	28. The method according to Claim 27, wherein the step of processing the application	
2	definition documents further comprises steps of:	
3	receiving one or more input documents to be used by the interactions; and	
4	performing one or more of: (1) transforming the input documents into other documents,	
5	according to transformation information that may be provided in the application definition	
6	documents, and (2) operating upon the input documents and/or the other documents to create on	
7	or more new documents, according to operating actions that may be provided in the application	
8	definition documents.	
1	29. The method according to Claim 28, further comprising the step of forwarding the other	
The street and street s	documents and/or the new documents to from one or the computers to another of the computers.	
1	30. The method according to Claim 27, wherein the structured markup language is a language	
2	known as "the Extensible Markup Language (XML)" or a derivative thereof.
